BRONZE REFINER

Introduction :

Bronze Refiner is a black powder. It refines metal and also removes unwanted particles through dross.

Application :

- It is mainly used in foundries melting copper alloys & bronze.
- It is used in bulk quantity in large copper alloy melting units depending upon the application.

Advantages :

- Reduces metal losses in slag and drosses.
- Reduces porosity to a minimum.
- An excellent casting surface finish is produced.
- Increases fluidity, so rejections due to misrun are reduces.

How to use :

- When the melt is ready add requisite amount of Bronze Refiner and mix it properly with the metal.
- During melting Bronze Refiner-55 combines with the metal and refines it by removing impurities from the metal. Impurities will float to the surface with dross.
- Skimaway these impurities and pour the metal in the moulds.

Precautions :

Use Hand gloves while using and handling fluxes. Hands should be washed after use.

Packing :

50 Kg HDPE Bag.

Bronze Refiner
