## Mould Coat

### Introduction :

- Mould Coat is a water base coating for heavy aluminium castings.

### Application :

- It is mainly used in aluminum Die-casting units & Ingot Manufacturing Units.
- It is also used in zinc melting foundries.

### Advantages :

- It is suitable to almost all metals.
- It can withstand low temperatures.
- Gives Excellent results in zinc & aluminum foundries.
- Works as a refractory coating.
- It can also be stored for a longer period.

### How To Use :

- Clean the mould / die / tool. Remove dust, oil and rust.
- After applying Mould Coat on the mould or brick lining, allow the surface to dry before use.
- Again before casting clean the surface to obtain non-sticky continuous metal flow.

### Precautions :

- This coating is not dangerous to skin but hand gloves should be use while handling and using it. Hands should be washed after use.
- Hands should be washed after use.

### Packing :

- 50 Kg Plastic Drum.
